

F. No. 39-04/2025- PD
Government of India
Ministry of Communications
Department of Posts
Parcel Directorate

Malcha Marg Post Office Complex,
Chanakyapuri, New Delhi-110021

Dated: 14.07.2025

To,

All CPMsG

**Subject: - Suggestions / Comments on the proposed network under the Mail
Parcel optimization Project**

The Department of Posts has undertaken a major transformative intervention to emerge as a modern, integrated, and efficient logistics service provider, capable of catering to the growing demands of the e-commerce, B2B, government, and citizen service segments across the country. As part of this strategic vision, the Department has set ambitious revenue targets over the next five years for parcels and mails, which will be one of the primary drivers of future growth for India Post.

2. The goal is to build a highly responsive, scalable, and technology-enabled logistics network that ensures faster and reliable deliveries, operational efficiency, and enhanced customer experience. The two key components to achieve these goals are:-

(a) Mail and Parcel Optimization Project (MPOP) – A comprehensive exercise undertaken and aimed at optimizing mail and parcel operations across the country through end-to-end redesign of the network and associated processes.

(b) Postal Logistics Infrastructure Project – A major infrastructure modernization initiative for which a Public Investment Board (PIB) Memorandum has been submitted. This project envisages a massive infusion of funds for establishing automated processing facilities and modernizing and automating L1 hubs and selected L2 hubs, and upgrading infrastructure across the parcel network to match industry standards.

3. The ongoing MPOP has been designed to build upon the learnings from similar projects in the past viz. Mail Network Optimisation Project (MNOP) and Parcel Network Optimisation (PNOP) and to develop a future-ready network. Under Deliverable 2 of MPOP, Network Rationalization and Optimization exercise for both mail and parcels has been completed. A detailed and data-driven approach has been followed including volume analysis, geographic mapping, benchmarking with industry logistics models, and consultations with stakeholders. The strategic document / approach while designing the new network is placed at **Annexure I**.

4. As a result of this exercise, a draft revised mail & parcel network, proposing significant modifications to the existing MNOP & PNOP framework respectively, has been prepared. The network is **indicative and tentative**, serving as an initial framework to guide planning and preparation. Its implementation will follow a phased approach over a period of five years, during which pilot projects will be designed, tested, and refined to validate operational feasibility and optimize processes. The learnings from these pilots and the necessary infrastructure development will inform the final rollout of the network,

ensuring that it is responsive to evolving volumes, customer needs, and technological advancements.

5. The following key documents have been submitted as part of the proposed revised Parcel and Mail Network:

Parcel Network

- (i) Proposed list of L1 hubs under MPOP (Annexure II)
- (ii) Proposed list of L2 hubs along with mapping with L1 (Annexure III),
- (iii) Proposed volumes to be handled by L2 Hubs, number of PIN codes to be served by L2 Hubs. (Annexure IV)
- (iv) Current L1 Hubs which do not exist in the new network / upgraded / downgraded (Annexure V)
- (v) Current L2 Hubs which do not exist in the new network / upgraded / downgraded (Annexure VI)
- (vi) Sorting District Mapping of L1 / L2 (Annexure VII)

6. Mail Network

While reviewing the existing mail profile of Speed Post and Registered articles it has been observed that all the existing NSHs are receiving 70%-90% of inbound mail from a few major booking locations and 70%-90% of outbound mail is being delivered within the Circle itself barring a few major processing hubs. Besides, distance of some ICHs from their mapped NSHs is not much and these ICHs are receiving mail either from within the NSHs/ICHs of the Circle or from a few major hubs.

- (i) Accordingly, the requirements of NSHs and ICHs across the country has been analysed based upon the inflow-outflow of mail, geographical conditions and delivery advantage etc. Revised list of NSHs and ICHs is attached as Annexure-VIII.

7. At this stage, a comprehensive consultation with all Circles on the proposed draft network to ensure its practical feasibility, regional suitability, and alignment with operational realities is necessary before its formal approval and phased implementation. It is therefore requested that the proposed draft mail and parcel network may be thoroughly examined and modifications, alternate hub locations, or any additional considerations submitted by **21st July 2025**. Suggestions about the Mail Network may be shared with Mails Division and Parcel related suggestions may be shared with Parcel Directorate. Given the strategic importance and long-term impact of this network design, Circles are requested to undertake this exercise with due priority and involve all concerned stakeholders, including regional and divisional heads.

8. This issue with the approval of the competent authority.

Enclosure: - As Above

(Ankur Tiwari)
Deputy General Manager
Parcel Directorate

Annexure I

Mail and Parcel Optimization Project (MPOP) – Network transformation strategy

As part of the Mail and Parcel Optimization Project (MPOP), McKinsey has partnered with Department of Posts (DoP) to develop a transformative strategy aimed at significantly scaling the parcel operations. In the next 5 years, India Post aims to increase daily parcel volumes tenfold – from current 0.2 million parcels to 2 million parcels per day and emerge as a dominant player in domestic parcels market. The projected growth is expected to be largely driven by capturing the volumes of e-commerce horizontal marketplaces (such as Amazon and Flipkart) and vertically dedicated platforms (such as Nykaa, Myntra).

To handle the anticipated growth while ensuring best-in-class Service Level Agreements (SLAs), India Post's existing logistics network must undergo a significant redesign. Key enablers include:

- Reducing the number of touchpoints to minimize manual handling and reduce transit time
 - India Post currently maintains a L1-L1-L2 hub sorting model i.e., articles injected in an L1 city are sorted at the origin hub (L1), destination hub (L1) with final sorting at destination secondary hub (L2) before dispatching it to the delivery offices
 - To support an efficient and SLA-driven operations, a shift to L1-L1 hub sorting model is being implemented. In this model the articles will be sorted at the origin hub (L1), destination hub (L2) for the catchment area pincodes before dispatching to delivery offices (NOTE: This model is subject to exceptions in areas where the accessibility or sorting complexity would be difficult for the hub to handle)
- Increasing automation across key nodes to support faster, more accurate, and scalable operations
 - As volumes grow (10X growth in volumes targeted) and sorting complexity increases due to sorting consolidation at L1 hubs, future hubs *would* require automation as per the following thresholds (Fully automated L1 hub: More than 1 lakh articles/day; Semi-automated L1 hub: 50,000-1 lakh articles/day; Basic PTL: less than 50,000 articles/day)

These changes are critical to maintain service competitiveness as parcel flows grow in complexity and volume.

Proposed parcel network

Parcel Hub Network (L1)

Future L1 hubs were identified through a five-fold approach, incorporating guidance from the Hon'ble Minister to build a state-agnostic, industry-aligned, and future-ready network backbone. Key factors included:

- Inclusion of major e-commerce fulfillment centers (e.g., Amazon, Flipkart) as primary origin centers
- Identification of demand hotspots aligned with district-level GDP growth projections over the next five years
- Correlation of identified locations with high telecom density (as a proxy for demand intensity) to pressure check identified location
- Ensuring surface and air connectivity – with all hubs located in proximity of national highways and airports
- Addition of select hubs based on land constraints (e.g., two hubs in Gurgaon and Noida instead of Delhi), strategic requirements and future development plans (e.g., Silchar)

Parcel Hub Network (L2)

L2 hubs have been proposed based on projected volumes and coverage, with the following roles:

- Improve SLAs and reduce costs by minimizing touchpoints and manual handling for pre-sorted volumes.
- Function as cross-docking centers (envisioned as Transit Mail Offices) receiving parcels from L1 hubs in pre-sorted bags.
- Limit parcel sorting primarily for catchment area, handling intra-city bookings and deliveries, with exceptions for L2–L1 and L2–L2 sorting within the same circle when volumes justify (Exceptions to be aligned between parcel directorate and circle teams)
- In regions like the Northeast, where terrain, accessibility, and land availability pose challenges, L2 hubs may handle sorting for volumes arriving from L1 centers.

NOTE: Network is subject to change basis evaluation of land availability and inputs from circle teams

List of Proposed L1 Hubs under MPOP

S.No.	Circle	Hub Name	Automation Level	Pincode	Sorting districts	Origin volume (parcels /day)	Destination volume (parcels/day)	Total OD Volume (parcels/day)
